

**WHAT IS CLAIMED IS:**

1. A method for suppressing a fraud control block in a telecommunications system, comprising the steps of:

- a) maintaining at least one record associated with a customer account;
- b) adding an override flag field to each of the at least one record;
- c) determining if an override flag is set in a record of the at least one record,

when said record is accessed during call processing of a call using a customer account associated with said record:

- d) overriding one or more fraud control blocks on an exchange blocked from processing the call if it is determined in step (c) that the override flag is set; and
- e) if overriding the one or more fraud control blocks, blocking the call based on an originating number of the call.

2. The method as recited in claim 1, wherein the at least one record of step (a) is maintained in a Billed Number Screening (BNS) database.

3. The method as recited in claim 1, wherein the call in step (c) is a special service call.

4. The method as recited in claim 3, wherein the special service call is an international call.

5. A device for suppressing a fraud control block in a telecommunications system,

comprising:

a database for maintaining at least one record associated with a customer account and having an override flag;

means for determining if the override flag is set in a record of the at least one record, when said record is accessed during call processing of a call using a customer account associated with said record;

means for overriding one or more fraud control blocks on an exchange blocked from processing the call if the determining means determines that the override flag is set; and

means for blocking the call based on an originating number of the call, if the overriding means overrides the one or more fraud control blocks.

6. The device as recited in claim 5, wherein the database is a Billing Number Screening (BNS) database.

7. The device as recited in claim 5, wherein the call is a special service call, and further wherein the means for determining and the means for overriding comprises a call processing platform.

8. A method of fraud control for a call from an originating number to an international destination, comprising:

overriding a call block to the international destination applied at an exchange

level of the originating number, based on an override flag associated with an account of the caller; and

blocking the call based on the originating number if the call block at the exchange level of the originating number is overridden.
